### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Objections*

Claim 1 is objected to because of the following informalities:

In claim 1, line 11 --and-- should be inserted before “said generator”.

Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Lisniansky (6,349,543). Lisniansky discloses in figure 26, a device arrangement structure in which a hydraulic pump 90 is driven with use of an engine 100 and a generator motor 290 in combination, and an inflow of discharge oil of the hydraulic pump 90 to hydraulic actuators 1 is controlled to drive a working machine, wherein the hydraulic pump 90 is connected to the engine 100 via a first power take-off 98 and a regenerative motor 300 which is driven by return oil from the hydraulic actuators 1 and regenerates inertia energy or potential energy of the working machine to drive the hydraulic pump 100, and the generator motor 290, which is driven as a generator with surplus torque when regeneration torque of the regenerative motor 300 is larger than driving torque of the hydraulic pump 100, and is driven as an electric motor to assist

Art Unit: 3745

with drive of the hydraulic pump 100, are provided in parallel with said hydraulic pump via the first power take-off 98.

***Allowable Subject Matter***

Claims 2-4 are allowed. The improvement comprises the electric motor, capacitor device, and inverter being placed separately from the hydraulic pump and regenerative motor for the purposes of improving reliability of operation.

***Prior Art***

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of three patents.

Naruse et al. '581 and '787 and Yoshimatsu et al. are cited to show hybrid construction equipment power devices.
